

Arch. Valerio Paolo Mosco

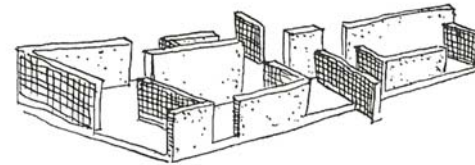

Smart = Sostenibilità

Nelle slides di presentazione le immagini “palpabili” della sostenibilità
in architettura a seconda della dimensione degli edifici

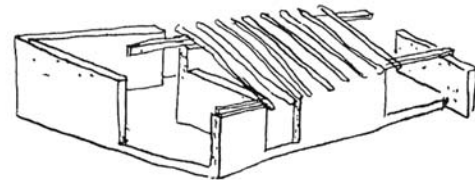

Les murs debout, leur construction est d'une simplicité extrême
The walls erected, their construction is extremely simple

Les murs, constituant des cellules dont la largeur est constante. En principe, les murs forment toujours une équerre qui assure la stabilité
The walls, making up cells of uniform size. In principle, each wall forms a right angle, assuring stability

On pose la toiture. Pour régler le travail, on fixe sur la tête des murs un bois de sciage bien horizontal. Puis on cloue les rondins
The roof is laid. For accuracy, the rafters are nailed to a true straight-sawn wall plate fixed to the top of the wall
